

Will It Float?		Grade 2: Properties of Liquids and Solids	
Curriculum Connections	Topic	Matter and Energy	
	Fundamental Concepts	Matter	
<p>Description In this lesson, students will learn about what objects float by testing and making hypotheses using the scientific method.</p>			
<p>Big Ideas Materials that exist as liquids and solids have specific properties. Liquids and solids interact in different ways.</p>		<p>Overall Expectations 2. investigate the properties of and interactions among liquids and solids</p>	
<p>Specific Expectations 2.4 use scientific inquiry/experimentation skills to investigate liquids and solids in terms of their capacity for buoyancy 2.5 use technological problem-solving skills and knowledge acquired from previous investigations, to design, build, and test a structure that involves interactions between liquids and solids</p>
