

Water Forces!

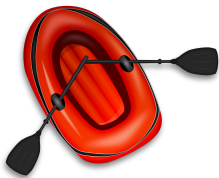

Grade 3: Forces Causing Movement

Fill in the blanks to complete the sentences using the word bank below.

wind	electricity	Water	friction
------	-------------	-------	----------

1. Water and wind are two forces in nature that are very good at causing things to move, change speed, or change direction.
2. The surface of water has less friction than the surface of the ground, allowing us to glide things over water with ease.
3. We can use the forces of water or wind to generate electricity ; we can use this to power things like lights and machines.

Look at the following pictures, and write **Water** if the driving force is water, or **Wind** if the driving force of nature is wind:

water

wind

wind

water

In the space below, draw 3 different ways you use water in your everyday life:

<p>Example:</p> <p>washing your hands</p>	<p>Example:</p> <p>taking a bath</p>	<p>Example:</p> <p>doing the dishes</p>
---	--------------------------------------	---
